Peossible Cause

Possible Cause

Possible Cause

Poor Performance At Low And Idle Speeds

Tappet oil holes clogged —Incorrect Check ignition timing and ———— Tappet damaged hydralic tappet condition · Improper ignition timing Correct (Faulty spark unit) See Fuel System Section -Incorrect-Check carburetor piot screw adjustment Correct Loose insulator clamps Leaking -Check for leaking intake pipe— Damaged insulator

4. Perform spark test — Weak or Intermittent Spark — Faulty, carbon or wet fouled spark plug
Good Spark — See Ignition System Section

Poor Performance At High Speed

No Leak

1. Check ignition timing and Incorrect Damaged hydraulic tappet hydraulic tappet condition Faulty spark unit Faulty pulse generator Correct Correct Carburetor Fuel Flow Restricted Clogged fuel line Clogged fuel tank breather Clogged fuel strainer
